METHOD, SYSTEM, AND APPARATUS FOR SELECTIVE AUTOMATED ELECTRONIC MAIL REPLIES

ABSTRACT

A method of communicating over a communications network can include the steps of defining a list specifying at least one electronic message source to which automated reply electronic messages are allowed and receiving an electronic message from a source. The source of the received electronic message can be compared with the source on the list and an automated reply electronic message can be sent to the source of the received electronic message if the source matches the source on the list.
